### PROFESSIONAL EXPERIENCE

Mr. Leatherbee is an industrial hygienist with experience working in highly controlled facilities from public schools to large defense industry facilities. He performs industrial hygiene inspections and monitoring during abatement projects involving asbestos, lead, mercury, and other hazardous building materials. He has a background in property systems management, building maintenance, and field sampling and testing. His extensive technical knowledge of property maintenance including plumbing, carpentry, and HVAC systems contributes to his practical understanding of building construction and diagnostics.

Mr. Leatherbee's experience in state and federal regulatory compliance facilitates effective collaboration and coordination with clients, contractors, compliance, and project staff. He also has expertise in managing and maintaining state and federal wastewater regulatory compliance, including Maine's Drinking Water Program.

#### Selected project experience include:

- **Portsmouth Naval Shipyard, Kittery, Maine** – Monitoring asbestos abatement projects, analyzing asbestos clearance samples, providing air and surface monitoring of lead, cadmium, and chromium for projects associated with dry dock maintenance and repairs.
- **Togus VA Medical Center, Chelsea, Maine** – Provided asbestos monitoring, analysis, and compliance over a variety of locations and projects ranging from thermal surface insulation removal to vinyl asbestos floor tile and mastic removal.
- **Various Maine public schools** – Maintained compliance with asbestos abatement plans and conducted both perimeter and clearance testing of asbestos during long-term abatement projects.
- **Various clients in Maine** – provided well water quality and regulatory compliance services for diverse facilities, including Central Maine Power, RSU 57 schools, and residential properties.
